SUMMARY

At Alfain Technologies, I excelled as a Junior Software Engineer, leveraging React.js and Node.js to enhance web applications, achieving significant performance improvements. My expertise in frontend and backend development, combined with my ability to foster cross-functional collaboration, has consistently driven project success. I focus on delivering scalable, high-performance solutions while maintaining clean and maintainable code

SKILLS

- **Skills:** React js, Next js, Typescript, Node Js, Mongo db, Express, API integration, HTML, CSS, Material UI, Bootstrap, Responsive Web Designs
- **Soft Skills:** Problem-Solving, Communication, Adaptability , Team Collaboration , Time Management

PROFESSIONAL EXPERIENCE

ALF.AIN Technologies (PVT) Limited

Oct 2023 - Present

Junior Software Engineer

53, dargah street, infantry road, Dharmapura Lahore

I excelled as a Junior Software Engineer, leveraging React.js and Node.js to enhance web applications, achieving significant performance improvements. My expertise in frontend and backend development, combined with my ability to foster cross-functional collaboration, has consistently driven project success. I focus on delivering scalable, high-performance solutions while maintaining clean and maintainable code.

- I develop and maintain user-facing web applications using React.js, ensuring seamless front-end and back-end integration.
- Build responsive UIs with React, scalable APIs with Node.js & Express.js, and manage databases with MongoDB.
- Collaborating with cross-functional teams, I focus on performance, security, and state management to deliver efficient and scalable solutions.

Projects

Legal Vocational Job Suitability Platform

- Developed a job evaluation tool for legal professionals to assess client employ-ability post-accident, based on physical, cognitive, educational, and environmental requirements.
- Integrated job requirement data and built logic to calculate job fit scores, supporting decision-making in personal injury and disability cases.

Real-Time Bus Tracking & Zone Analytic - Hajj Operations

- Built a GPS-based bus tracking system for the Saudi government to manage and optimize pilgrim transportation during Hajj.
- Tracked zone entries/exits, stop duration, and path history, with dashboards showing real-time metrics and movement heat-maps for better operational control.

Healthcare Management System

- Developed a multi-portal system for hospitals, doctors, and patients, enabling seamless appointment booking, schedule management, and administrative workflows.
- Built front-end interfaces and back-end services to ensure smooth, secure, and role-based access across all portals.

Solar Panel Management System

- Built a real-time monitoring system for solar panel installations, tracking location, power output, and system health.
- Implemented dashboards for issue reporting, inspection logs, and energy analytic to improve panel efficiency and maintenance.
